

# Denim workshop

## 14 oz. Japanese Indigo denim

### Natural indigo yarn dyed

The indigo dye itself is obtained from the dried leaves of the Indigofera plant from India. Although these days, with mass production, almost all indigo is synthetic through chemical engineering which is a lot cheaper but not as rich in color than the natural indigo used.

### Romance

Our indigo pigment denim is washed for softness for a tasteful worn in look, with lots of life to live. Our black jean is a true deep black that wont turn grey in the wash, staying pitch black forever. We feature our Raw denim as like a new pair of leather boots, which could easily last a decade of wear if you treat them right

### Alterations

All of our denim runs 34"-34.5" inseam. We offer complementary hemming that takes about 1-2 weeks to complete at our tailor service. Let us mark your desired length for you? Do you cuff your jeans often? All of our denim feature the button fly to ensure longevity, that could be easily replaced if impaired at all.

### Selvedge

The words selvedge denim relate to self-edge or self-finished fabric edges. Today self-edge weaving has become desirable again because of the heritage of the weaving technique and the commitment to quality from the mills that choose to produce it. In terms of style, selvedge denim jeans have one distinct advantage. Rolled or cuffed selvedge jeans show the selvedge ID and it looks interesting.

### Visual standards

Every stack of denim consist of 6-8 pairs of the same jean, with tags located in front pocket. When building a denim wall, the stacks progress from lightest to darkest denim, keeping it simple, add books between piles if desired, with PK cards to distinguish the fits.

### Washes

Light, Medium, Dark, Black, & Raw Selvedge

### Composition

2% Spandex 98% Cotton

Black: 1% stretch

Raw denim: 100% Cotton
